OVERVIEW

What is?

The ZMCAPPS Connector Archiving Service provides a seamless bridge between the native archiving process in the SAP Integration Suite and your preferred file storage infrastructure. The solution integrates directly with the standard archiving tools already built into the SAP Integration Suite, enabling you to offload data effortlessly to your chosen storage environments.

SERVICE TECHNICAL NAME

`archiving-connector-service-for-sap-integration-suite`

INFRASTRUCTURE

Environments

The service is available in the following environments:

Environment	Region	LB IPs (ingress)	NAT IPs (egress)
Trial (trial)	Europe Frankfurt (eu01)	TBD	TBD
Production (prod)	Europe Frankfurt (eu01)	TBD	TBD

API REFERENCE

Endpoints

The host URL pattern is:

```
https://<organization>.archiving-connector-service-for-sap-integration-suite.<environment code>.<region code>.zmcapps.com
```

This service provides the following endpoints:

Browser

For use exclusively by SAP BTP.

Property	Value
Path	/browser
Authentication	Basic

Management

This service is exclusively for customers who need to manage repositories and complete the enrollment process (to obtain credentials).

Property	Value
Path	/management/docs
Authentication	Basic

GETTING STARTED

Onboarding

Form

Before initiating the service setup, a mandatory onboarding form must be completed. This form collects essential information required for the provision and configuration of your dedicated organization instance within the service.

The required information includes:

- **Organization Name:** The name to be used for your organization within the service.
- **Allowed Source IPs:** A list of IP addresses or ranges that will be permitted to access the service's management endpoint (for security/firewall purposes).
- **Technical Contact Email:** The email address for receiving important service notifications, including the enrollment details.
- **Allowed SAP BTP regions:** The region codes where the SAP BTP archiving job is running.

Once the form is submitted and processed, your organization instance will be provisioned in the specified environment and region.

Enrollment Process

Following the successful creation of your organization, the technical contact will receive an **Enrollment Email**. This email contains a **One-Time Enrollment Token** that is essential for obtaining your secure access credentials.

This token must be used by calling the following management API endpoint:

- **Endpoint:** <host url>/management/docs#/Enrollment/get_enrollment

Successful execution of this API call will provide the **Basic Authentication User and Password** required for configuring the SAP BTP Destination, as detailed in the Set-up section. This step finalizes your service enrollment.

CONFIGURATION

Set-up

The essential requirement is to adhere to the standard archiving setup prescribed for SAP Integration Suite.

[Archiving Data, Cloud Foundry Environment | SAP Help Portal](#)

When creating the SAP BTP Destination, the following properties must be configured:

Property	Value or Description
Name	CloudIntegration_LogArchive
Type	Type of protocol must be HTTP
Description	Description of the destination
URL	/browser (from onboarding email / Endpoints section)
Proxy Type	Internet
Authentication	BasicAuthentication
User	/management/docs#/Enrollment/get_enrollment
Password	/management/docs#/Enrollment/get_enrollment

Additional Properties

Additional Properties	Value or Description
RepositoryId	/management/docs#/Repositories/get_repository
